

## IMPORTANT!

READ ALL INSTRUCTIONS CAREFULLY

**DO NOT DESTROY OR DISCARD ORIGINAL PACKING MATERIALS**

It is imperative that you inspect your order as soon as your product has been received. CopperSmith cannot, under any circumstances, accept returns on products that have been installed. If a product arrives damaged, please save all original packing materials. Please photograph immediately and email the images to [support@worldcoppersmith.com](mailto:support@worldcoppersmith.com).

### Disclaimer

Installation must be performed by a licensed professional only.

Installation must comply with all local building and safety codes.

Installation should not be scheduled until the product is received and inspected for damage or defect.

CopperSmith is not responsible for any installation delays or damages incurred as a result of installation.

CopperSmith is not responsible and does not supply any hardware or tools necessary for installation.

Do not apply painter's tape to any part of the sink, as this may cause irreversible damage to the finish.

### Guidelines

CopperSmith sinks should be installed according to all plumbing and building codes by a licensed contractor.

**PLAN AHEAD** - Because CopperSmith sinks are constructed from solid, heavy-gauge metals; they are considerably heavy. When unpacking your sink, make sure to place protective material (cardboard, packing foam, a throw rug, etc.) between your sink and the floor to avoid any damage. You may also need some assistance when moving or lifting your sink to avoid risk of personal injury.

Because CopperSmith products are hand-made, the specified dimensions of your sink may be approximate (+/- 1/8 inch). It is always best to use the actual basin of your sink as a template for any cutout requirements.

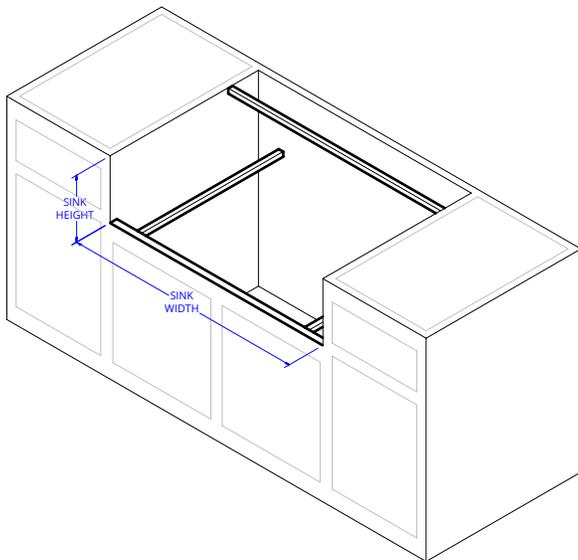

Make sure all drain connections have a secure, water-tight seal.

Always use non-water based, 100% silicone adhesive.

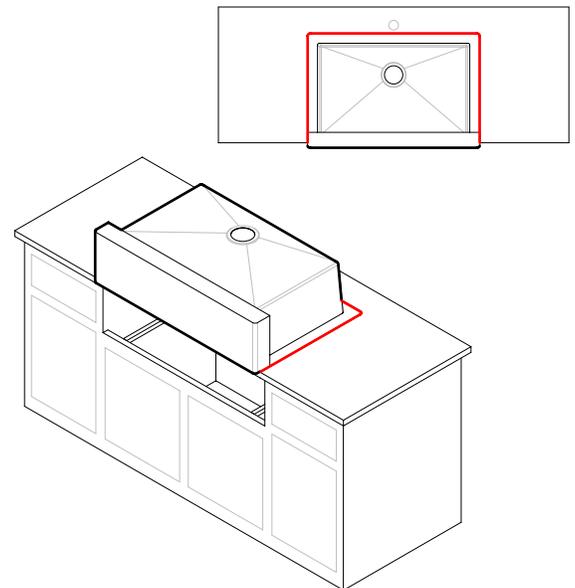

Make sure to leave enough space behind the basin for your back-splash, faucet, faucet handles, and any other accessories. Also make sure to accommodate a full range of motion for any moving parts.

**CLEANUP** - When cleaning up after the installation, DO NOT use abrasive cleaners or scouring materials that might damage or alter the sink's finish. Instead, use warm water and a soft cloth with a non-abrasive soap, such as dish soap.

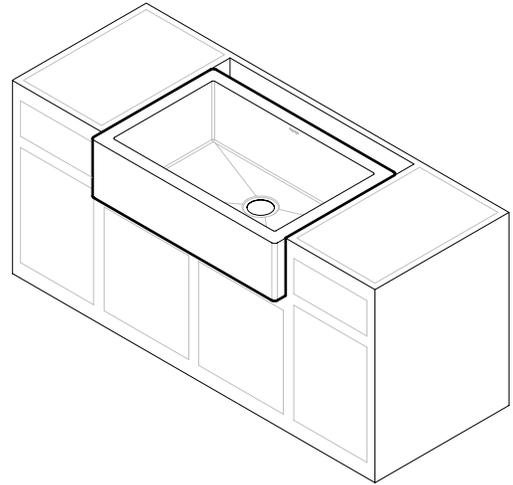

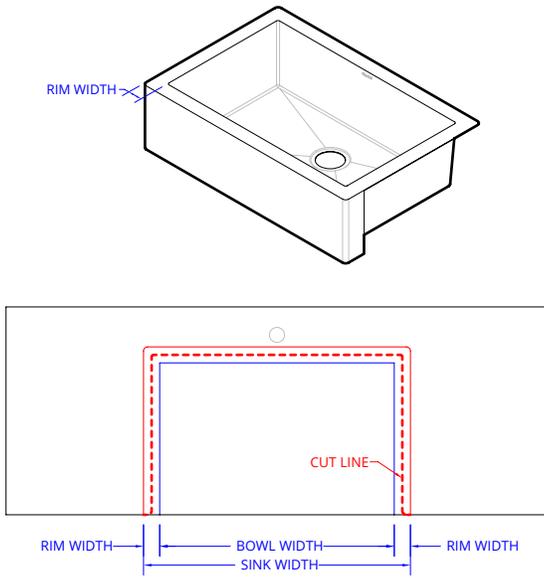

### Farmhouse Sink Instructions

1. Build a support frame into the cabinet, or install support bars from the front to the back of the cabinet along the inner sides. The support should be positioned so the sink, when installed, is level and in-line with the top of the cabinet. If you are unsure about how to build a frame or install support bars that will provide adequate support, consult a professional installer.

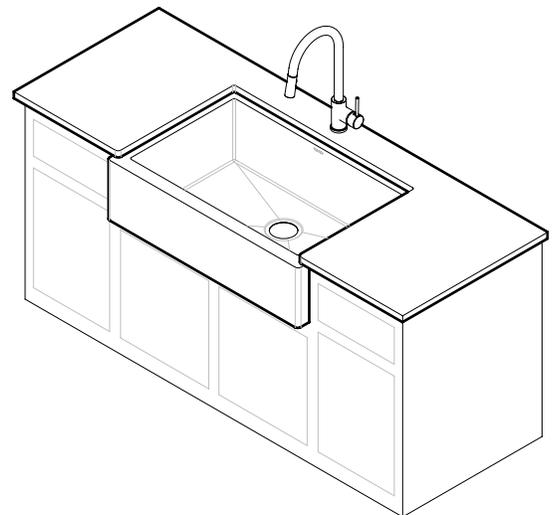

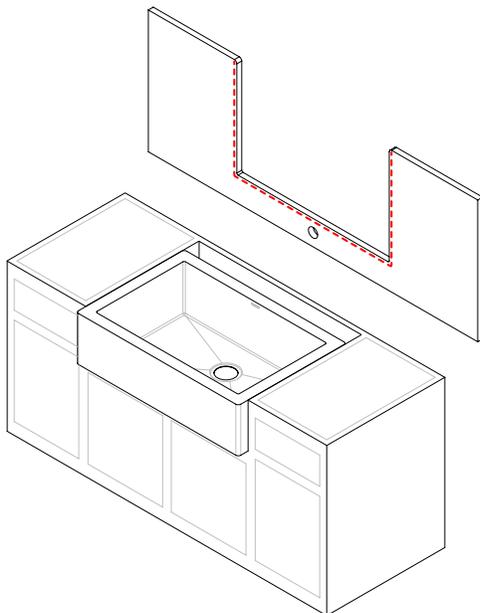

2. Place the basin of the sink upside down on the counter top surface and mark the surface of the counter top by tracing around the outside edge of the lip. Make sure to provide clearance for your faucet or any other fixtures (including clearance for full range of motion on all moving parts). Make sure to account for the front apron's outside reveal.

3. Measure the distance between the inside edge of the basin and the outer edge of the lip. Mark the counter top inside of the first tracing. The distance between the two lines should be equal to the width of the lip. Cut the counter top at the mid-point between the two lines. Confirm a proper fit by temporarily placing basin under the cut-out.

4. Place the sink into the opening of the support frame built in Step 1. The frame should support the entire weight of the sink. Confirm the sink is level in all directions and in-line with the top of the cabinet.

5. Apply 100% non-water-based silicone underneath the counter top around the cut-out area.

6. Position the counter top onto the cabinet and over the sink. Confirm the basin is sitting level in all directions while pressing to seal. Remove all excess silicone.
